

- تشغيل الصوت عنصر واجهة المستخدم الصوتية

أداة (Play Audio Widget) تشغيل رسالة مسجلة أثناء المكالمة. استخدم هذه عنصر واجهة المستخدم المستخدم لعرض المعلومات للمستخدم قبل إجراء لاحق.

The screenshot displays a workflow builder interface. The main workspace shows a sequence of steps: 'WEBHOOK TRIGGER' (green checkmark), 'BRANCH', 'SEND WHATSAPP TEMPLATE' (with a WhatsApp icon), 'MAKE A CALL' (with a phone icon), and 'PLAY AUDIO' (with a speaker icon). The 'BRANCH' step has two outgoing paths: one labeled '((Channel)) = Whatsapp' leading to 'SEND WHATSAPP TEMPLATE', and another labeled '((Channel)) = Voice' leading to 'MAKE A CALL'. The 'PLAY AUDIO' step is currently selected, and its configuration panel is visible on the right. The panel includes a 'Variables' dropdown, a 'PARAMETERS' section with a close button, and a 'PLAY AUDIO' section with a play icon. The 'Select the audio' dropdown is set to 'tts_english_male_1605704247'. Below this is a volume slider and a play button. The 'Audio URL' field contains 'https://production-website-voice-api-audio-library.s3.i'. The 'Number of loops' field is empty. A green 'SAVE' button is at the bottom of the panel.
